CONTENTS (cont'd)

1200  Novel Antagonists of the Inhibitory Glycine Receptor Derived from Quinolinic Acid Compounds  
Volker Schmieden, Sylvie Jezequel, and Heinrich Betz

1207  Antiretrovirus Specificity and Intracellular Metabolism of 2',3'-Didehydro-2',3'-dideoxythymidine (Stavudine) and Its 5'-Monophosphate Triester Prodrug So324  

1214  Agonist-Induced Functional Desensitization of the μ-Opioid Receptor Is Mediated by Loss of Membrane Receptors Rather than Uncoupling from G Protein  
Youngshil Pak, Angeliki Kouvelas, Mark A. Scheideler, Jesper Rasmussen, Brian F. O'dowd, and Susan R. George

1223  Enantiomers of myo-Inositol-1,3,4-trisphosphate and myo-Inositol-1,4,6-trisphosphate: Stereospecific Recognition by Cerebellar and Platelet myo-Inositol-1,4,5-trisphosphate Receptors  

1231  Evidence for Distinction of the Differentiation-Inducing Activities and Cytostatic Properties of 9-(2-Phosphonyl-methoxyethyl)adenine and a Variety of Differentiation-Inducing Agents in Human Erythroleukemia K562 Cells  
S. Hatse, E. De Clercq, and J. Balzarini

1243  Pharmacological Differentiation between Intracellular Calcium Pump Isoforms  
Simone Engelender and Leopoldo De Meis

1253  Pharmacological Modulation of the Diazepam-Insensitive Recombinant γ-Aminobutyric AcidA Receptors α4β2γ2 and α6β2γ2  
Frédéric Knoflach, Dietmar Benke, Yue Wang, Louis Scheurer, Hartmut Lüddens, Beverly J. Hamilton, Donald B. Carter, Hanns Mohler, and Jack A. Benson

1262  Cyclic AMP-Independent Inhibition of Cardiac Calcium Current by Forskolin  
Tatsuya Asai, Siegried Pelzer, and Terence F. Mcdonald

1273  Membrane-Delimited G Protein-Mediated Coupling between V1a Vasopressin Receptor and Dihydropyridine Binding Sites in Rat Glomerulosa Cells  
Eric Grazzini, Thierry Durroux, Marcel-Daniel Payet, Lyne Bilodeau, Nicole Gallo-Payet, and Gilles Guillon

1284  Direct Inhibition of 5-Hydroxytryptamine3 Receptors by Antagonists of L-type Ca2+ Channels  
Andrew C. Hargreaves, Martin J. Gunthorpe, Colin W. Taylor, and Sarah C. R. Lummis

1295  Regulation of D2 Dopamine Receptors by Amiloride and Amiloride Analogs  
S. R. J. Hoare and P. G. Strange

1309  Dopamine Induces Apoptotic Cell Death of a Catecholaminergic Cell Line Derived from the Central Nervous System  
Joseph M. Masserano, Li Gong, Henrietta Kulaga, Ivory Baker, and Richard Jed Wyatt

1316  5-Hydroxytryptamine4 Receptors Reduce Afterhyperpolarization in Hippocampus by Inhibiting Calcium-Induced Calcium Release  
Gonzalo E. Torres, Cynthia L. Arfken, and Rodrigo Andrade

About the cover: Targeting of δ-opioid receptor to surface membranes. COS-1 cells were transfected with a mouse δ-opioid receptor mutant (D128A), for which the conserved aspartate in the third membrane domain is replaced by alanine. Cells were double-labeled with fluorescein-conjugated concanavalin A to label the plasma membrane (green) and with an anti-δ-opioid receptor antibody followed by rhodamine-conjugated streptavidin (red). Yellow shows the region of colocalization. This mutant exhibited reduced expression and subtle changes in its ability to bind certain agonist ligands. From Befort, K., L. Tabbara, S. Bausch, C. Chavkin, C. Evans, and B. Kieffer. The conserved aspartate residue in the third putative transmembrane domain of the δ-opioid receptor is not the anionic counterpart for cationic opiate binding but is a constituent of the receptor binding site. Mol. Pharmacol. 49: 216-223 (1996).
