

Erratum

In the article by Reisine *et al.* [Reisine T, Kong H, Raynor K, Yano H, Takeda J, Yasuda K, and Bell GI (1993) Splice variant of the somatostatin receptor 2 subtype, somatostatin receptor 2B, couples to adenylyl cyclase. *Mol Pharmacol* **44**:1016–1020], there are two errors in the legend to Fig. 3.

First, the legend for Fig. 3A indicates that three experiments were performed; in fact, only two experiments were performed for the SSTR2B mutants. Second, the legend for Fig. 3B indicates that the values presented are the average of two different experiments; in fact, the inhibition curve shown was based on a single experiment.

To the best of my knowledge, these errors do not alter the basic conclusion of the paper, that the 2B subtype of the somatostatin receptor couples to adenylyl cyclase; however, I deeply regret these errors.

Terry Reisine, Ph.D.
