

## Correction to “Design and *In Vitro* Pharmacology of a Selective $\gamma$ -Aminobutyric Acid<sub>C</sub> Receptor Antagonist”

In the above article [Ragozzino D, Woodward, RM, Murata Y, Eusebi, F, Overman, LE, and Miledi R (1996) *Mol Pharmacol* **50**:1024–1030], Fig. 6 contains an error. In the bottom panel of Fig. 6, a set of data points are repeated. The data points surrounding the third drug application (200 nM APMPA) during minutes ~35–45 are the same values as those in the second drug application during minutes 15–25 (200 nM APMPA + 10 micro TPMPA). Upon reexamining the figure, Dr. Ragozzino acknowledged that it contains repeated data points. The data used to create the figure are no longer accessible, and Dr. Ragozzino is unable to determine how the error occurred.

The authors regret the error and their inability to access the original data to explain it. Nothing indicates that the error was intentional or malicious.
