

# Correction to “Pharmacological Discrimination of Calcitonin Receptor: Receptor Activity-Modifying Protein Complexes”

In the above article [Hay DL, Christopoulos G, Christopoulos A, Poyner DR, and Sexton PM, (2005) *Mol Pharmacol* 67:1655–1665], Figure 6 was accidentally duplicated in Figure 7. The correct version of Figure 7 is contained herein for  $AMY_{3(a)}$  receptor data.

The authors regret this error and any inconvenience it may have caused.

**Figure 7.** Representative antagonist curves at  $AMY_{3(a)}$  receptors:  $sCT_{8-32}$  (A and E),  $CGRP_{8-37}$  (B and F),  $AC187$  (C and G), and  $AC413$  (D and H) with hCT (A–D) or rAMY (E–H) as agonist. Control (agonist alone) (●), +  $10^{-8}$  M antagonist (△), +  $10^{-7}$  M antagonist (▽), +  $10^{-6}$  M antagonist (◇), and +  $10^{-5}$  M antagonist (○).
