

MOLECULAR PHARMACOLOGY'S 2007 IMPACT FACTOR

Due to confusion between citations to *Molecular Pharmacology* and *Molecular Pharmaceutics*, a journal that was included in the Journal Citation Report (JCR) for the first time in 2007, *Molecular Pharmacology* initially received an incorrect Impact Factor.

Citations to these journals have been manually analyzed and resolved by the JCR since the 2007 numbers were first published. As a result, *Molecular Pharmacology* received an adjusted Impact Factor of 4.088 for 2007. The revised number will appear in the JCR when it is updated in mid-October.

Please note that the abbreviated title for *Molecular Pharmacology* is ***Mol Pharmacol***. This abbreviation should be used in all citations to the journal.
