

AUTHOR INDEX FOR VOLUME 19

A

- Aarbakke, Jarle, and Ueland, Per M. Interaction of *s*-Adenosylhomocysteine with Isolated Rat Hepatocytes, 463
- Albuquerque, E. X., Warnick, J. E., Maleque, M. A., Kauffman, F. C., Tamburini, R., Nimit, Y., and Daly, J. W. The Pharmacology of Pumiliotoxin-B. I. Interaction with Calcium Sites in the Sarcoplasmic Reticulum of Skeletal Muscle, 411
- Alonso, Angel. See *Kühn and Heinrich*, 103
- Appu Rao, A. G., and Cann, John R. A Comparative Study of the Interaction of Chlorpromazine, Trifluoperazine, and Promethazine with Mouse Brain Tubulin, 295
- Arduengo, A. J. See *Kilbourn, Park, and Katzenellenbogen*, 388
- Ashley, Patricia L., and Griffin, Brenda Walker. Involvement of Radical Species in the Oxidation of Aminopyrine and 4-Aminoantipyrine by Cumene Hydroperoxide in Rat Liver Microsomes, 146

B

- Bachur, Nicholas R. See *Pan and Pedersen*, 184
- Baker, Peter F. See *Honerjäger and Reiter*, 68
- Balzarini, J. See *De Clercq, Torrence, Mertes, Schmidt, Shugar, Barr, Jones, Verhelst, and Walker*, 321
- Bannon, Michael J., Michaud, Richard L., and Roth, Robert H. Mesocortical Dopamine Neurons: Lack of Autoreceptors Modulating Dopamine Synthesis, 270
- Barber, Roger, and Butcher, Reginald W. The Quantitative Relationship between Intracellular Concentration and Egress of Cyclic AMP from Cultured Cells, 38
- Barr, P. J. See *De Clercq, Balzarini, Torrence, Mertes, Schmidt, Shugar, Jones, Verhelst, and Walker*, 321
- Beaulieu, Denise. See *Rosenblatt, Whitehead, Vuchich, Pottier, and Matiaszuk*, 87
- Belvedere, G. See *Gozukara, Robinson, Deutsch, Coon, Guengerich, and Gelboin*, 153
- Bergman, Mark O. See *Olsen, Van Ness, Lummis, Watkins, Napias, and Greenlee*, 217
- Bertino, Joseph R. See *Scanlon, Cashmore, Moroson, and Dreyer*, 481
- Billiau, Alfons. See *De Clercq, Heremans, Descamps, Verhelst, and De Ley*, 122
- Bourne, Henry R. See *Salomon*, 109
- Brennan, M. J. W., Cantrill, R. C., Oldfield, M., and Krogsgaard-Larsen, P. Inhibition of γ -Aminobutyric Acid Agonist Drugs: Pharmacology of the γ -Aminobutyric Acid Receptor, 27
- Brown, Kenneth B. See *Pringle and Miller*, 49
- Bürgisser, Ernst, Hancock, Arthur A., Lefkowitz, Robert J., and De Lean, Andre. Anomalous Equilibrium Binding Properties of High-Affinity Racemic Radioligands, 205
- Bürgisser, Ernst, Lefkowitz, Robert J., and De Lean, Andre. Alternative Explanation for the Apparent "Two-Step" Binding Kinetics of High-Affinity Racemic Antagonist Radioligands, 509
- Butcher, Reginald W. See *Barber*, 38
- Byrne, John R. See *Milne*, 276

C

- Camerman, Arthur. See *Camerman*, 517
- Camerman, Norman, and Camerman, Arthur. On the Stereochemistry of Dopaminergic Ergoline Derivatives, 517
- Cann, John R. See *Appu Rao*, 295
- Cantor, Elinor H., Greenberg, Louise H., and Weiss, Benjamin. Effect of Long-Term Changes in Sympathetic Nervous Activity on the β -Adrenergic Receptor-Adenylate Cyclase Complex of Rat Pineal Gland, 21

- Cantrill, R. C. See *Brennan, Oldfield, and Krogsgaard-Larsen*, 27
- Cascales, Maria. See *Cerdán and Santos-Ruiz*, 451
- Cashmore, Arlene R. See *Scanlon, Moroson, Dreyer, and Bertino*, 481
- Catterall, William A., and Risk, Martin. Toxin T₄ from *Ptychodiscus brevis* (Formerly *Gymnodinium breve*) Enhances Activation of Voltage-Sensitive Sodium Channels by Veratridine, 345
- Catterall, William A. See *Tamkun*, 78
- Cerdán, Sebastian, Cascales, Maria, and Santos-Ruiz, Angel. Effect of Thioacetamide on the Pentose Phosphate Pathway and Other NADP-Linked Enzymes of Rat Liver Cytosol: Chronology of the Perturbations and Metabolic Significance, 451
- Chang, Jaw Kang. See *Wu, Lee, Ling, Loh, and Yang*, 302
- Chin, J. H., and Goldstein, D. B. Membrane-Disordering Action of Ethanol: Variation with Membrane Cholesterol Content and Depth of the Spin Label Probe, 425
- Christopherson, Rose. See *Wartell, Watkins, and Rannels*, 520
- Cimino, Mauro. See *Prozialeck and Weiss*, 264
- Cole, Susan P. C., Zelt, David T., and Marks, Gerald S. Comparison of the Effects of Griseofulvin and 3,5-Diethoxycarbonyl-1,4-dihydro-2,4,6-trimethylpyridine on Ferrochelatase Activity in Chick Embryo Liver, 477
- Conn, P. Michael. See *Marian and Cooper*, 399
- Conney, A. H. See *Nordqvist, Thakker, Vyas, Yagi, Levin, Ryan, Thomas, and Jerina*, 168
- Coon, J. J. See *Gozukara, Belvedere, Robinson, Deutsch, Guengerich, and Gelboin*, 153
- Cooper, Ralph L. See *Marian and Conn*, 399
- Cox, David. See *Kaslou, Groppi, and Bourne*, 406
- Cusi, D., and Garay, R. P. The Effect of Tienilic Acid on Na⁺ and K⁺ Transport in Human Red Cells, 438

D

- Daly, J. W. See *Albuquerque, Warnick, Maleque, Kauffman, Tamburini, and Nimit*, 411
- De Clercq, E., Balzarini, J., Torrence, P. F., Mertes, M. P., Schmidt, C. L., Shugar, D., Barr, P. J., Jones, A. S., Verhelst, G., and Walker, R. T. Thymidylate Synthetase as Target Enzyme for the Inhibitory Activity of 5-Substituted 2'-Deoxyuridines on Mouse Leukemia L1210 Cell Growth, 321
- De Clercq, Erik, Heremans, Hubertine, Descamps, Johan, Verhelst, Gabriel, De Ley, Marc, and Billiau, Alfons. Effects of *E*-5-(2-Bromovinyl)-2'-Deoxyuridine and Other Selective Anti-Herpes Compounds on the Induction of Retrovirus Particles in Mouse BALB/3T3 Cells, 122
- De Lean, Andre. See *Bürgisser, Hancock, and Lefkowitz*, 205
- De Lean, Andre. See *Bürgisser and Lefkowitz*, 509
- De Ley, Marc. See *De Clercq, Heremans, Descamps, Verhelst, and Billiau*, 122
- Descamps, Johan. See *De Clercq, Heremans, Verhelst, De Ley, and Billiau*, 122
- Deutsch, J. See *Gozukara, Belvedere, Robinson, Coon, Guengerich, and Gelboin*, 153
- Dickinson, K., Richardson, A., and Nahorski, S. R. Homogeneity of β ₂-Adrenoceptors on Rat Erythrocytes and Reticulocytes: A Comparison with Heterogeneous Rat Lung β -Adrenoceptors, 194
- Dreyer, Robert N. See *Scanlon, Cashmore, Moroson, and Bertino*, 481

NOTICE

The Subject Index for Volume 19 will appear in the November 1981 issue as part of a cumulative index for the year 1981.

INSTRUCTIONS TO AUTHORS

Molecular Pharmacology will publish the results of investigations that shed significant light on drug action or selective toxicity at the molecular level. The term "drug" is defined broadly to include chemical agents that selectively modify biological function.

Suitable papers are those which describe applications of the methods of biochemistry, biophysics, genetics, and molecular biology to problems in pharmacology or toxicology. Also suitable are reports of fundamental investigations which, although not concerned directly with drugs, nevertheless provide an immediate basis for further study of the molecular mechanism of drug action. Observations of phenomena that shed no light upon underlying molecular interactions are not regarded as appropriate for publication.

Specific areas of interest include: stereochemical, electronic, and other parameters of drug architecture; conformational analysis of receptors and their function; drug-enzyme and other interactions between drugs and macromolecules; drug effects upon gene replication and transcription and on protein synthesis; mechanism of action of antibiotics and other growth-inhibitory drugs; induction by drugs of changes in macromolecular structure or allosteric transitions; drug-induced alterations in metabolic pathways; effects of hormones and other drugs on cellular regulatory mechanisms; chemical mutagenesis, carcinogenesis, and teratogenesis; pharmacogenetics, idiosyncrasies, and drug allergies; selective toxicity in a single organism or in different species; drug actions on properties and functions of membranes; mechanisms of drug metabolism; distribution and transport of drug molecules between biological compartments.

"Short Communications" will be considered for rapid publication if their subject matter lies within the scope of the Journal, if they are concise, and if they are considered to be of sufficiently immediate importance to the work of other investigators to justify accelerated publication. They may contain experimental observations, theoretical material, or significant comment upon published investigations.

Page charges. Authors will be billed at the rate of \$30.00 per page after the paper has been published. It is expected that the page charge will be paid if funds are available for that purpose from the author's institution or from the sponsor of this research. Payment of the charge is not a condition for publication. Neither the editors nor the reviewers will have knowledge as to who has paid the charge, and this payment always will be considered entirely voluntary.

Submission of manuscript. Manuscripts are published in English only and should be sent to the Editor, Dr. Norman Kirshner, Department of Pharmacology, Duke University Medical Center, Durham, North Carolina 27710, U.S.A. Manuscripts should be typewritten double spaced with ample margins on one side of the paper, 8½ × 11 inches (ca. 215 × 280 mm). Submit three complete copies of the manuscript and three copies of each figure, plus one original drawing or photograph of each figure. All pages should be numbered consecutively beginning with the title page. Limit your reference listings to the minimal number required to adequately document the manuscript. In most instances 30 references or fewer should suffice.

It is understood that the manuscripts and the results they contain will not have been published previously and are not being submitted elsewhere. Manuscripts are accepted for review with the understanding that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Molecular Pharmacology* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher. If and when a manuscript is published, it will become the sole property of the Journal.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Society for Pharmacology and Experimental Therapeutics. No reasonable request by the author for permission to reproduce any of his or her contributions to the journal will be refused.

Organization and style of manuscripts. The policy of the Journal is to allow authors maximum freedom in organizing and presenting

their material, and in expressing their ideas, provided only that clarity and conciseness are achieved.

Certain conventions must be observed. Chemical and mathematical formulas and abbreviations should follow the *Instructions to Authors of the Journal of Biological Chemistry* (Vol. 255, pp. 1-11, January 10, 1980). Drugs must be referred to by their generic or chemical names throughout the text, but may be identified by trade name in parentheses or a footnote. The systematic name and number given by the Commission on Enzymes of the International Union of Biochemistry should be included for each enzyme of importance in a paper, at the point in the Summary or Introduction where the enzyme is first mentioned. The use of abbreviations should be minimized and abbreviations avoided in the Summary. All essential abbreviations should be defined in a single footnote when first introduced. Abbreviations of journal names should conform to the style of *Biological Abstracts*. References to papers that have been accepted for publication, but have not appeared, should be cited like other references with the abbreviated name of the journal followed by the words "in press." Copies of such papers should be sent whenever the findings described in them have a direct bearing on the paper being submitted for publication. "Personal Communications" and "Unpublished Observations" should be cited in footnotes to the text and should not be included in the reference list.

A manuscript should include the following, in the order listed: (1) Title. Numbered footnotes to the title should be avoided; acknowledgment of financial support should be given in an unnumbered footnote to the title. (2) Names of authors, their laboratory and institution. (3) A running title, not exceeding 60 characters and spaces. (4) Summary preceded by authors' names and title of article. For example:

SUMMARY

DAIRMAN, W., AND S. UDENFRIEND. Studies on the mechanism of the L-3,4-dihydroxyphenylalanine-induced decrease in tyrosine hydroxylase activity. *Mol. Pharmacol.* 8:293-299 (1972).

(5) Text. Footnotes should be referred to by superscript numbers and references by numbers in parentheses. (6) References, numbered according to order of citation in the text, including title and complete pagination. Examples: 1. Goren, J. H., L. G. Baue, and W. Vale. Forces and structural limitations of binding of thyrotropin-

releasing receptor: the pyroglutamic acid moiety. *Mol. Pharmacol.* 13:606-614 (1977). 2. Sandler, M. Variations in monoamine oxidase activity in some human disease states, in *Monoamine Oxidase and Its Inhibition*. Ciba Foundation Symposium 39. Elsevier, Amsterdam, 327-340 (1976) (7). Footnotes, numbered according to order of appearance in the text. (8) Tables. (9) Figures. (10) Legends to figures. (11) Name and address of person to receive galley proof.

Tables. These should be numbered with arabic numerals and designed to fit the single-column width of the full-page width. Every table should have an explanatory title and sufficient experimental detail in a paragraph following the title to be intelligible without references to the text (unless the procedure is given in the Methods section, or under another table or figure). Footnotes to tables should appear beneath the tables themselves and should be designated by lower-case italic superscript letters, *a*, *b*, *c*, etc.

Figures. These should be numbered with arabic numerals. Each of the three manuscript copies should contain all the figures, but only the original set need be of quality suitable for reproduction. These should be unmounted glossy photographs (or original India-ink drawings). Usually figures will be reduced to one column width (85 mm) and all numbers *after* such reduction should be at least 1.5

mm high. The figures must be ready, in all respects, for direct reproduction: no lettering or other art work will be done by the publisher. If symbols are not explained on the face of the figure, only standard characters, of which the printer has type, may be used (\times , \square , \circ , \bullet , \triangle , \blacktriangle , \odot). The back of each photograph should bear its number, and the legend TOP at the appropriate edge. The list of legends for the figures should give captions and sufficient experimental detail, as required for tables.

Galley proof. The cost of all changes on galley proof, other than printer's errors, will be charged to authors. The Editors are very much interested in having accepted contributions appear in the earliest possible issue of the Journal, and therefore request that galley proof be returned within 24 hours after its receipt. In exceptional cases, a "Note added in proof" may be attached and will be published if the Editor approves.

Reprints and page charges. An order form for reprints as well as information on the estimation of page charges will be mailed with galley proof. Please direct questions on reprints, page charges, or other business matters to Dr. Houston Baker, Executive Officer, American Society for Pharmacology and Experimental Therapeutics, 9650 Rockville Pike, Bethesda, Md. 20014. Telephone (301)530-7060.
