SUBJECT INDEX FOR VOLUME 41

A

- Acetaminophen, toxicity in hepatocytes, level, cytosolic free calcium (mouse), 665
- Acetylcholine, binding site, photoactivatable agonist, nicotinic acetylcholine receptor, 1100
- Acetylcholinesterase
interaction of tetrahydroaminoacridine (*Torpedo*), 412
noncovalent inhibitor ambenonium, one of highest known affinities (human), 937
- Adenosine triphosphate
analogues and UTP, neuronal "nucleotide" receptor, phospholipase C and D, 561
 β -dependent K⁺ channel in pancreatic B cells, tolbutamide sensitivity, cytosolic nucleosides (mouse), 480
regulation of signal transduction, purinergic receptor, NCB-20 cells, 743
- Adenylate cyclase
adenosine A_{2A} receptors, striatum and PC12 cells (rat), 352
cardiac, guanylnucleotide specificity, muscarinic receptor inhibitory coupling (dog), 177
stimulation by amylin, CHO-K1 cells, 894
- Adenylyl cyclase
activity in hippocampal membranes, lack of apparent receptor reserve, 5-HT_{1A} (rat), 1066
beta adrenoceptors, subtype-selective coupling to G_s (bullfrog), 889
interaction of aminoalkylcarbamates (bovine), 360
neuropeptide Y₁ subtype pharmacology, recombinantly expressed neuropeptide receptor, 817
SRIF receptor coupling, pituitary-derived AtT-20 cells, 452
transfection of human 5-HT_{1A} receptors, NIH-3T3 cells, 999
uncoupled β -adrenergic receptors, mutant constructs, functional activation of Na-H exchange, 1056
- Adipocytes, enhancement of differentiation, insulin-sensitizing agent, 393
- Adrenal chromaffin cells, vasoactive intestinal polypeptide, tyrosine hydroxylase induction, cholinergic agonists (bovine), 456
- Adrenal gland, immunological characterization, dehydroepiandrosterone sulfotransferase (human), 645
- Adrenal glomerulosa, modulation of angiotensin II binding affinity, allosteric interaction, polyvinyl sulfate, 809
- Adrenoceptors
alpha, isoproterenol-initiated diacytosis, cultured cells (human), 375
beta
activation of Na-H exchange, mutant constructs, 1056
binding to 5-HT_{1A} receptors, single amino acid residue, 695
hydrophobic amino acids, activation of G_s and third intracellular loop, 1061
inhibition of Ca²⁺ entry-mediated generation, inositol phosphates (guinea pig), 509
subtype-selective coupling to G_s (bullfrog), 889
beta versus *alpha*-2, loss of response to norepinephrine, primary glial cultures (rat), 688
- Adriamycin
ADR-529 Fe³⁺-anthracycline complex, direct complexation, 8
multidrug-resistant colon cancer cell line, glutathione S-transferase overexpression, thiol pools (human), 69
-resistant leukemia cells, overcoming vinblastine resistance, isoquinolinesulfonamide compounds, 1034
- Alkylformamides, *N*-methylformamide, metabolic oxidation and toxicification, CYP2E1 (mouse), 259
- Ambenonium, noncovalent inhibitor of acetylcholinesterase, one of highest known affinities (human), 937

Amino acid

- determination of residues, substance P selectivity and specificity, neurokinin receptors (rat), 1096
- hydrophobic, third intracellular loop, β -adrenergic receptor in activation of G_s, 1061
- selectivity of transmitters, NMDA and amino-3-hydroxy-5-methyl-4-isoxazolepropionate receptors (rat), 520
- Aminoalkylcarbamates, forskolin, interaction with adenylyl cyclase (bovine), 360
- γ -Aminobutyric acid, A or C receptors, *Xenopus* oocytes, 683
- (RS)- α -Amino-3-hydroxy-5-methylisoxazole-4-propionic acid, receptors in brain, multiple states, quantitative autoradiography (rat), 832
- Amlodipine, alteration of binding to membrane lipid bilayer, cholesterol (rabbit), 315
- Amylin, stimulation of adenylyl cyclase, CHO-K1 cells, 894
- Anesthetics, isoflurane, acetylcholine receptor channels, 127
- Angiotensin II
modulation of binding affinity, allosteric interaction, polyvinyl sulfate, 809
modulation of binding by allosteric interaction, polyvinyl sulfate, bovine adrenal glomerulosa, 809
peptide and nonpeptide antagonists, receptor interaction, 1081
- Antagonists, tissue response as a functional discriminator, receptor heterogeneity, Schild regressions, 699
- Anthracycline
ADR-529 Fe³⁺ complex, direct complexation, 8
anticancer agents, helicase inhibition, 993
- Antidepressants, increased glucocorticoid receptor gene promoter activity, 1016
- Antipsychotics, risperidone and ocpiperidone, receptor binding, monoamine turnover (rat), 494
- Antisense technology, phosphorothioate oligonucleotides, inhibitors, DNA polymerases and RNase H (human), 223
- 1- β -D-Arabinofuranosylcytosine
transcriptional and posttranscriptional regulation, H1 histone gene expression, 64
transcription factor κ B, human myeloid leukemia cells, 60
- Arcaine, block of N-methyl-D-aspartate receptor responses, open channel mechanism, hippocampal neurons (rat), 727
- Asialoglycoprotein, receptor RHL-1, late-stage spermatids (rat), 639
- Atrial natriuretic peptide, inactivation, neutral endopeptidase-24.11, vascular endothelium (rat, rabbit, human), 609
- AtT-20 cells, pituitary-derived, SRIF receptor/adenylyl cyclase coupling, 452
- Autoradiography, (RS)- α -amino-3-hydroxy-5-methylisoxazole-4-propionic acid receptors, multiple states, brain (rat), 832
- Azathioprine, compared to mizoribine, T cell proliferation, purine ribonucleotide metabolism (human), 671
- 3'-Azido-3'-deoxythymidine, metabolite and, hemoglobin synthesis, K-562 cells, 252
- 5'-Azido-5'-deoxythymidine, membrane permeation characteristics (human), 950
- Aziridinium ion, conversion of N-(2-chloroethyl)-4-piperidinyl diphenylacetate, interaction with muscarinic receptors, 718

B

- Barbiturate, γ -aminobutyric acid A or C receptor, *Xenopus* oocytes, 683
- (S)-Bay K 8644, FPL 64176 and, functional interactions, smooth muscle (rat), 599

- B cells, pancreatic, cytosolic nucleosides and tolbutamide sensitivity, ATP-dependent K⁺ channel (mouse), 480
- Benzazepines, substituted, competitive antagonism of glutamate receptor channels, cortical neurons, 1130
- Benzodiazepine, γ -aminobutyric acid A or C receptor, *Xenopus* oocytes, 683
- Bicuculline
 γ -aminobutyric acid A or C receptor, *Xenopus* oocytes, 683
 low doses, NMDA single-channel kinetics, whole-cell currents (mouse), 900
- Bile, detection of radical adducts, free radical metabolism, halothane (rat), 943
- Brain
 (*RS*)- α -amino-3-hydroxy-5-methylisoxazole-4-propionic acid receptors, multiple states, quantitative autoradiography (rat), 832
 cerebellar Purkinje neurons, permeation by calcium, kainate/ α -amino-3-hydroxy-5-methyl-4-isoxazolepropionic acid receptors (rat), 603
 cortical neurons, competitive antagonism of glutamate receptor channels, substituted benzazepines, 1130
 developmental profile, metabotropic glutamate receptor mRNA (rat), 660
 dextrorphan binding, NMDA receptor-cation channel (rat), 134
 endothelin-converting enzyme, endothelial cells (rat), 399
 glycine site on NMDA receptor, improved affinity, kynurenic acid analogues (rat), 914
 heterogeneity of angiotensin II AT₂ receptors (rat), 290
 membranes, L-689,560 binding, NMDA receptor (rat), 923
 monoamine turnover, receptor binding, risperidone and ocpaperidone (rat), 494
 RNA, hexachlorocyclohexanes, GABA receptors, 1107
 steroids and γ -aminobutyric acid receptors, poly(A)⁺ RNA (*Xenopus*), 89
 subtype of nicotinic cholinergic receptor, chronic nicotine treatment (rat), 31
 synaptic membranes, organophosphate interactions, NMDA receptors (rat), 750
- Bumetanide, chloride transport blockers, prevention, NMDA receptor-channel complex activation (rat), 217
- tert*-Butyl hydroperoxide, killing of cultured hepatocytes, vitamin E effects, 1155
- Butyrylcholinesterase, interaction of tetrahydroaminoacridine (*Torpedo*), 412
- C**
- Calcium
 cAMP and, competitive regulation, phospholipase C responses, 577
 cytosolic free, acetaminophen toxicity, hepatocytes (mouse), 665
 dihydropyridine Ca²⁺ antagonist receptor, ion dependence, mitochondria, 45
 entry into dissociated neurons, NMDA receptors, reduced and oxidized glutathione (rat), 308
 entry-mediated generation of inositol phosphates, activation of β -adrenergic receptors, myometrium (guinea pig), 509
 inositol 1,4,5-trisphosphate-induced release, dynamic control, 110
 luminal, sensitivity of Ca²⁺ stores, inositol 1,4,5-trisphosphate, 115
 neuropeptide Y-induced intracellular release, erythroleukemic cells (human), 767
 neuropeptide Y₁ subtype pharmacology, recombinantly expressed neuropeptide receptor, 817
 NMDA-evoked influx, inhibition by sodium nitroprusside (rat), 779
 permeation of kainate/ α -amino-3-hydroxy-5-methyl-4-isoxazolepropionic acid receptors, cerebellar Purkinje neurons (rat), 603
 receptor-mediated entry, block of maitotoxin effects, SK&F 96365, 487
 thyroid cell adenylyl cyclase activity, carbachol-induced decrease (dog), 163
- Calcium channel
 activators (*S*)-Bay K 8644 and FPL 64176, functional interactions, smooth muscle (rat), 599
 L-type, sadopine ligand (rabbit), 298
 regulation and subcellular location, nitrogen oxide synthases, RAW264.7 macrophages (mouse), 615
 voltage-dependent, Kupffer cells (rat), 435
- Calcium channel blocker, alteration of binding by cholesterol, membrane lipid bilayer (rabbit), 315
- Calcium current
 forskolin and an analog, cardiac myocytes (bullfrog), 880
 serotonin, 5-HT₄ receptors, atrial myocytes (human), 346
- Carbachol, -induced decrease, thyroid cell adenylyl cyclase activity (dog), 163
- Carbamylcholine, phencyclidine-sensitive ethidium binding, *Torpedo* acetylcholine receptor, 331
- Carbonic anhydrase, sulfonamides and, direct measurements, rate constants, 419
- Carcinogens, chemical, oxidation, lung microsomal cytochrome P-450 1A1 (human, rat), 856
- Cerebellum
 molecular cloning and characterization, major endothelin receptor subtype (pig), 465
 Purkinje neurons, permeation by calcium, kainate/ α -amino-3-hydroxy-5-methyl-4-isoxazolepropionic acid receptors (rat), 603
- Chlorambucil, resistance, role of glutathione, glutathione S-transferase (mouse), 625
- Chloride, transport blockers, prevention, NMDA receptor-channel complex activation (rat), 217
- CHO cells, hydrogen peroxide-induced DNA damage, effects of L-histidine, 969
- CHO-K1 cells, stimulation of adenylyl cyclase by amylin, 894
- Cholesterol, alteration of binding of Ca²⁺ channel blockers, membrane lipid bilayer (rabbit), 315
- Cholinergic agonists, tyrosine hydroxylase induction, vasoactive intestinal polypeptide, adrenal chromaffin cells (bovine), 456
- Chrysophanol, topoisomerase II-mediated DNA cleavage activity, irreversibility, cleavable complex formation, 237
- Cisplatin, multidrug-resistant colon cancer cell line, glutathione S-transferase overexpression, thiol pools (human), 69
- Cobra α -toxin, phencyclidine-sensitive ethidium binding, *Torpedo* acetylcholine receptor, 331
- Cocaine, interactions with primary and secondary recognition sites, muscarinic receptors (human), 736
- Colonic neoplasms, multidrug-resistant, glutathione S-transferase overexpression, thiol pools (human), 69
- Corticosteroids, expression of cytochromes P450, cyclosporin A oxidase activity, hepatocytes (human), 1047
- Cyclic AMP
 calcium and, competitive regulation, phospholipase C responses, 577
 pathways of phosphoinositide hydrolysis, DDT₁-MF₂ cells, 587
- Cyclic GMP, -independent mechanism, inhibition of NMDA-evoked calcium influx, sodium nitroprusside (rat), 779
- Cyclosporin A oxidase, activity in hepatocytes, effect of corticosteroids, cytochromes P450 (human), 1047
- Cytochrome P-450
 corticosteroids, cyclosporin A oxidase activity, hepatocytes (human), 1047
 enzyme activities and cytochrome P-450IIC11, imprinting by peri-pubertal administration, testosterone in females (rat), 981
 isoenzyme CYP2E1, metabolic oxidation and toxicification, *N*-methylformamide (mouse), 259
 microsomal, role of isozymes, metabolism of retinoic acid (rabbit), 427
- Cytochrome P-450 1A1
 lung microsomal, oxidation of chemical carcinogens (human, rat), 856

Cytochrome P-450 1A1—continued

NADPH-cytochrome P450 reductase and, distribution in lung, 2,3,7
8-tetrachlorodibenzo-*p*-dioxin (rabbit), 1039

Cytochrome P-450 3A4, liver microsomal *N*-hydroxylation of dapsone (human), 975

Cytochrome P-450 IIB1, monoclonal antibodies, recognition of different epitopes, human IIE1, 76

Cytochrome P-450 IIE, pretranslational activation, ketosis induced by high fat diet (rat), 474

Cytokinesis, selective inhibition, pseudopteroide, embryos (sea urchin), 631

Cytosol, nucleosides, tolbutamide sensitivity, ATP-dependent K⁺ channel in pancreatic B cells (mouse), 480

D

Dapsone, liver microsomal *N*-hydroxylation, cytochrome P-450A4 (human), 975

DDT₁-MF₂ cells, pathways of phosphoinositide hydrolysis, cyclic AMP, 587

Dehydroepiandrosterone sulfotransferase

immunological characterization, liver and adrenal (human), 645
liver, molecular cloning and expression, cDNA (human), 865

Delphinium brownii, methyllycaconitine, blockade of nicotinic currents, hippocampal neurons (rat), 802

2'-Deoxyguanosine, carbocyclic analog, incorporation into DNA of herpes simplex virus, Hep-2 cells, 245

5'-Deoxythymidine, membrane permeation characteristics (human), 950

Dextrorphan, binding in brain, NMDA receptor-cation channel (rat), 134

Diacylglycerol, second messengers, quantitative analysis, platelets (human), 382

Diacytosis, isoproterenol-initiated β-adrenoregic receptor, cultured cells (human), 375

2,6-Diamino-*N*-[(1-(1-oxotridecyl)-2-piperidinyl)methyl]hexanamide, novel inhibitor of protein kinase C, interaction, regulatory domain, 38

Diaphorase, NADPH-dependent, induction, aortic smooth muscle and macrophages, 1163

Dideoxypyrimidine 5'-monophosphate, membrane-permeable analogue, inhibition of HIV infection (human), 441

Diet, high fat, pretranslational activation of cytochrome P450IIE, ketosis (rat), 474

1,5-(Diethylamino)piperidine, activation of NMDA receptor-associated polyamine site, 989

Dihydropyrazole, insecticides, block of sodium channels, nerve (crayfish), 120

Dihydropyridine, Ca²⁺ antagonist receptor, ion dependence, mitochondria, 45

1,4-Dihydropyridines, pharmacologic and radioligand binding studies, cardiac and vascular preparations (rat), 535

Distamycin, -ellipticine hybrid molecule, DNA-binding properties, 845
DNA

-binding properties, distamycin-ellipticine hybrid molecule, 845
helicase inhibition, anthracycline anticancer agents, 993
herpes simplex virus, carbocyclic analog of 2'-deoxyguanosine, Hep-2 cells, 245

hydrogen peroxide-induced damage and cytotoxicity, L-histidine, cultured mammalian cells, 969

DNA, complementary, molecular cloning and expression, liver dehydroepiandrosterone sulfotransferase (human), 865

DNA polymerase, inhibition by phosphorothioate oligonucleotides, antisense technology (human), 223

DNA topoisomerase II, -mediated DNA cleavage activity, irreversibility, cleavable complex formation, 237

Dopamine, D1 gene, molecular cloning and expression (monkey), 652

Dorsal horn, neurons, activation of glutamate and glycine receptors, L-proline (rat), 793

Drug delivery, lactosylated HDL, parenchymal liver cells (human), 404

DT-diaphorase, activation of mitomycin C under hypoxia, 677

DuP753

angiotensin II receptor, guanine nucleotide-binding protein signaling pathways, 154

-sensitive angiotensin II receptor, modulation of angiotensin II binding affinity, polyvinyl sulfate, 809

E

Eledoisin, binding to NK1 receptors, lung (guinea pig), 147

Ellipticine, -distamycin hybrid molecule, DNA-binding properties, 845

Embryo, selective inhibition of cytokinesis, pseudopteroide (sea urchin), 631

Emodin, topoisomerase II-mediated DNA cleavage activity, irreversibility, cleavable complex formation, 237

Endothelial cells, endothelin-converting enzyme, brain (rat), 399

Endothelin

-converting enzyme, endothelial cells, brain (rat), 399
receptor subtype, molecular cloning, cerebellum (pig), 465

Endothelium

distribution of cytochrome P450 1A1, NADPH-cytochrome P450 reductase, lung (rabbit), 1039

vascular, inactivation of atrial natriuretic peptide, neutral endopeptidase-24.11 (rat, rabbit, human), 609

Enterotoxin, *Escherichia coli* heat-stable, low affinity receptors, 1073

Erythrocytes, membrane permeation characteristics, 5'-modified thymidine analogs (human), 950

Erythroleukemic cells, neuropeptide Y-induced intracellular calcium release (human), 767

Escherichia coli, heat-stable enterotoxin, low affinity receptors, 1073

Estramustine, two analogues and, molecular conformation, 569

Ethanol, cerebellar granule cell exposure to, *N*-methyl-D-aspartate receptor function and, 1142

Ethidium, phenyclidine-sensitive binding, *Torpedo* acetylcholine receptor, 331

F

Fatty acid, ligand-operated synthesis, 4-series and 5-series leukotrienes, neutrophils (human), 757

Fentanyl, molecular determinants of μ receptor recognition, 185

Fibroblasts, distinct regulation, β₁- and β₂-adrenergic receptors (hamster), 542

Flufenamic acid, chloride transport blockers, prevention, NMDA receptor-channel complex activation (rat), 217

Forskolin

aminoalkylcarbamates, interaction with adenylyl cyclase (bovine), 360

analog and, calcium currents, cardiac myocytes (bullfrog), 880

noncompetitive inhibitor, nicotinic acetylcholine receptors, 908

FPL 64176, (S)-Bay K 8644 and, functional interactions, smooth muscle (rat), 599

Furosemide, chloride transport blockers, prevention, NMDA receptor-channel complex activation (rat), 217

G

Gene, molecular cloning and expression, D1 dopamine receptor (monkey), 652

Glia, primary cultures, loss of response to norepinephrine, β- versus α₂-adrenergic receptors (rat), 688

Glioma, NG108-15 neuroblastoma X glioma hybrid cells, guanine nucleotide-binding proteins, 822

Glutamate

activation of NMDA receptor-associated polyamine site, 1,5-(diethylamino)piperidine, 989

competitive antagonism of receptor channels, substituted benzazepines, cortical neurons, 1130

receptor messenger RNA in brain, developmental profile (rat), 660

- L-Glutamate, NMDA and amino-3-hydroxy-5-methyl-4-isoxazolepropionate receptors, selectivity, amino acid transmitters (rat), 520
- Glutathione, reduced and oxidized, NMDA receptors, calcium entry into dissociated neurons (rat), 308
- Glutathione S-transferase
elevation of thiol pools, multidrug-resistant colon cancer cell line (human), 69
glutathione and, role in chlorambucil resistance (mouse), 625
human μ or α class, cellular sensitivity, cytotoxic agents, 230
- Glycine
activation of NMDA receptor-associated polyamine site, 1,5-(diethylamino)piperidine, 989
improved affinity and selectivity, kynurenic acid analogues, NMDA receptor from brain (rat), 914
- G proteins
activation of G_s and third intracellular loop, hydrophobic amino acids, 1061
coupling of somatostatin receptors, adenylyl cyclase, pituitary-derived AtT-20 cells, 452
heterogeneity of angiotensin II AT₂ receptors, brain (rat), 290
interaction with δ -opioid receptor, NG108-15 neuroblastoma X glioma hybrid cells, 822
-linked receptors, drug efficacy, 549
signaling pathways, angiotensin II receptor, DuP754, 153
specific antibodies against G_o isoforms, neuronal differentiation, 273
subtype-selective coupling to G_a, β_1 - and β_2 -adrenergic receptors (bullfrog), 889
- GTP-binding proteins, transfection of human 5-HT_{1A} receptors, NIH-3T3 cells, 999
- Guanosine-5'-O-(2-thiodiphosphate), intracellular, receptor-mediated responses, sympathetic neurons (bullfrog), 527
- Guanosine triphosphate, regulation of binding, muscarinic receptor agonists, cardiac sarcolemma (dog), 168
- Guanylate cyclase, *Escherichia coli* heat-stable enterotoxin, low affinity receptors, 1073
- Guanylucleotide, specificity for muscarinic receptor inhibitory coupling, cardiac adenylate cyclase (dog), 177
- H**
- Halothane, free radical metabolism, radical adducts, detection in bile (rat), 943
- Heart
cloned human potassium channel, block by quinidine, mouse L cell line, 322
myocytes, effects of forskolin and an analog, calcium currents (bullock frog), 880
pharmacologic and radioligand binding studies, 1,4-dihydropyridines (rat), 535
sarcolemma, regulation of GDP and GTP binding, muscarinic receptor agonists (dog), 168
- Helicase, inhibition by anthracycline anticancer agents, 993
- Hemoglobin, synthesis in K-562 cells, 3'-azido-3'-deoxythymidine and its metabolite, 252
- Hepatocytes
acetaminophen toxicity, level, cytosolic free calcium (mouse), 665
cyclosporin A oxidase activity, effect of corticosteroids, cytochromes P450 (human), 1047
killing by tert-butyl hydroperoxide, vitamin E effects, 1155
primary culture, phase II metabolism, warfarin (rat), 209
- Hep-2 cells, incorporation of carbocyclic analog, 2'-deoxyguanosine, herpes simplex virus, 245
- Herpes, (S)-1-[3-hydroxy-2-(phosphonylmethoxy)propyl]cytosine, intracellular metabolism, 197
- Herpes simplex virus, incorporation of carbocyclic analog, 2'-deoxyguanosine, Hep-2 cells, 245
- Hexachlorochclohexanes, γ -aminobutyric acid receptors, RNA from mammalian brain and retina, *Xenopus* oocytes, 1107
- Hippocampus
lack of apparent receptor reserve, postsynaptic 5-HT_{1A} receptors (rat), 1066
neurons
blockade of nicotinic currents, methyllycaconitine (rat), 802
block by arecaine, NMDA receptor responses (rat), 727
nicotinic acetylcholine currents (rat), 931
- L-Histidine, hydrogen peroxide-induced DNA damage and cytotoxicity, cultured mammalian cells, 969
- Histone, H1 gene expression, down-regulation, 1- β -D-arabinofuranosylcytosine, 64
- HIV-1
molecular characterization, resistance to non-nucleoside inhibitors, reverse transcriptase, 446
reverse transcriptase
allosteric inhibition, tetrahydroimidazo[4,5,1-jk][1,4]benzodiazepin-2(1H)-one, 203
interaction of inhibitors, 963
- Human immunodeficiency virus, inhibition, membrane-permeable di-deoxyuridine 5'-monophosphate analogue (human), 441
- Hydrogen peroxide, -induced DNA damage and cytotoxicity, L-histidine, cultured mammalian cells, 969
- 1-[(2-Hydroxyethoxy)methyl]-6-(phenylthio)thymine, interaction of tetrahydroimidazo[4,5,1-jk][1,4]benzodiazepin-2(1H)-one, HIV type 1 reverse transcriptase, 963
- (S)-1-[3-Hydroxy-2-(phosphonylmethoxy)propyl]cytosine, intracellular metabolism, 197
- Hypothalamic-pituitary-adrenal axis, increased glucocorticoid receptor gene promoter activity, after antidepressant treatment, 1016
- Hypoxia, activation of mitomycin C, DT-diaphorase, 677
- I**
- ICRF-187, ADR-529 Fe³⁺-anthracycline complex, direct complexation, 8
- Imprinting, peripubertal administration of testosterone, hepatic microsomal cytochrome P-450 enzyme activities (rat), 981
- Inositol 1,4,5-trisphosphate
-induced Ca²⁺ release, dynamic control, 110
sensitivity of Ca²⁺ stores, luminal Ca²⁺, 115
- Inositol phosphates, Ca²⁺ entry-mediated generation, activation of β -adrenergic receptors, myometrium (guinea pig), 509
- Insecticides, dihydropyrazole, block of sodium channels, nerve (crayfish), 120
- Insulin, -sensitizing agent, enhancement, adipocyte differentiation, 393
- Intercalator-alkylator, irreversible topoisomerase II-DNA complex, 237
- Ion, dependence, partially purified mitochondrial dihydropyridine Ca²⁺ antagonist receptor, 45
- Isoflurane, acetylcholine receptor channels, 127
- Isoproterenol, -initiated β -adrenergic receptor diacytosis, cultured cells (human), 375
- Isoquinolinesulfonamide compounds, overcoming vinblastine resistance, Adriamycin-resistant leukemia cells, 1034
- Isradine, alteration of binding to membrane lipid bilayer, cholesterol (rabbit), 315
- K**
- Kainate, α -amino-3-hydroxy-5-methyl-4-isoxazolepropionic acid receptors, permeation by calcium, cerebellar Purkinje neurons (rat), 603
- KB cells, regulation of P-glycoprotein phosphorylation, phorbol ester and protein kinase C inhibitors, 1008
- K-562 cells, hemoglobin synthesis, 3'-azido-3'-deoxythymidine and its metabolite, 252
- Ketosis, induction by high fat diet, pretranslational activation, cytochrome P450IIE (rat), 474

Kupffer cells

stimulation of monooxygenation and conjugation, liver transplantation (rat), 1149

voltage-dependent calcium channels (rat), 435

Kynurenic acid analogues, improved affinity and selectivity for glycine site, NMDA receptor, brain (rat), 914

L

L858051, forskolin and, effects on calcium currents, cardiac myocytes (bullfrog), 880

L-689,560, characterization of binding on NMDA receptor, brain membranes (rat), 923

Leukemia, myeloid, 1- β -D-arabinofuranosylcytosine treatment, transcription factor κ B, 60

Leukemia cells, Adriamycin-resistant, overcoming vinblastine resistance, isoquinolinesulfonamide compounds, 1034

Leukotrienes

biosynthesis inhibitors, 5-lipoxygenase-activating protein, 267

4-series and 5-series, ligand-operated synthesis, neutrophils (human), 757

synthesis inhibition, 5-lipoxygenase-activating protein binding assay (human), 873

Ligand

guanine nucleotide-binding regulatory protein-linked receptors, drug efficacy, 549

-operated synthesis of 4-series and 5-series leukotrienes, free fatty acid supply, neutrophils (human), 757

[35 S]adopine, L-type calcium channels (rabbit), 298

single amino acid residue responsible for binding, β -adrenergic receptor antagonists, 5-HT_{1A} receptors, 695

Lipids

bilayer, cholesterol, Ca²⁺ channel blockers (rabbit), 315

cationic, cellular uptake and activity, phosphorothioate antisense oligonucleotides, 1023

Lipopolysaccharide, induction of NADPH-dependent diaphorase, nitric oxide synthase activity, smooth muscle, 1163

Lipoprotein, lactosylated HDL, carrier for site-specific delivery of drugs, liver parenchymal cells (human), 404

5-Lipoxygenase

-activating protein

binding assay, leukotriene synthesis inhibition (human), 873

target of novel hybrid, classes of leukotriene biosynthesis inhibitors, 267

Liver

dehydroepiandrosterone sulfotransferase

immunological characterization (human), 645

molecular cloning and expression, cDNA (human), 865

detection of radical adducts, free radical metabolism, halothane (rat), 943

parenchymal cells, lactosylated high density lipoprotein, carrier for site-specific delivery of drugs (human), 404

-specific asialoglycoprotein receptor RHL-1, late-stage spermatids (rat), 639

transplantation, stimulation, monooxygenation and conjugation (rat), 1149

Liver microsomes

cytochrome P-450 enzyme activities, imprinting by peripubertal administration, testosterone in females (rat), 981

N-hydroxylation of dapsone, cytochrome P-4503A4 (human), 975

role of isoenzymes, cytochrome P-450, metabolism of retinoic acid (rabbit), 427

Lung

binding to NK1 receptors, radioiodinated substance P, neurokinin A and eledoisin (guinea pig), 147

distribution of cytochrome P450 1A1, NADPH-cytochrome P450 reductase, 2,3,7,8-tetrachlorodibenzo-p-dioxin (rabbit), 1039

microsomal cytochrome P-450 1A1, role in oxidation, chemical carcinogens (human, rat), 856

M

Macrophages

induction of NADPH-dependent diaphorase, nitric oxide synthase activity, smooth muscle, 1163

RAW264.7, regulation and subcellular location, nitrogen oxide synthases (mouse), 615

Maitotoxin, effects blocked by SK&F 96365, 487

Mammalian cells, stable expression of active human renin, 53

MCF-7 cells, human μ or α class glutathione S-transferases, cellular sensitivity, cytotoxic agents, 230

6-Mercaptopurine, compared to mizoribine, T cell proliferation, purine ribonucleotide metabolism (human), 671

N-Methyl-D-aspartate

-evoked calcium influx, inhibition by sodium nitroprusside (rat), 779

single-channel kinetics, low doses of bicuculline, whole-cell currents (mouse), 900

receptor function, cerebellar granule cell exposure to ethanol and, 1142

N-Methylformamide, metabolic oxidation and toxification, cytochrome P450 isoenzyme CYP2E1, 259

Methyllycaconitine, blockade of nicotinic currents, hippocampal neurons (rat), 802

Microsomes, cytochrome P-450 1A1, oxidation of chemical carcinogens, lung (human, rat), 856

Mitochondria

dihydropyridine Ca²⁺ antagonist receptor, ion dependence, 45

stimulation of monooxygenation and conjugation, liver transplantation (rat), 1149

Mitomycin C, activation, hypoxia, DT-diaphorase, 677

Mizoribine, comparison of effects, T cell proliferation, purine ribonucleotide metabolism (human), 671

Monoamine, turnover, receptor binding, risperidone and ocpiperidone (rat), 494

Monoclonal antibodies, recognition of different epitopes, rat cytochrome IIB1, reaction with human IIE1, 76

Monoxygenation, stimulation, conjugation, liver transplantation (rat), 1149

Multidrug resistance

colon cancer cell line, glutathione S-transferase overexpression, thiol pools (human), 69

overcoming vinblastine resistance, isoquinolinesulfonamide compounds, Adriamycin-resistant leukemia cells, 1034

regulation of P-glycoprotein phosphorylation, phorbol ester and protein kinase C inhibitors, KB cells, 1008

Muscarinic antagonists, structural basis of subtype selectivity, chimeric m2/m5 muscarinic receptors (human), 369

Muscle, smooth

cyclic AMP differentiation, phosphoinositide hydrolysis pathways, 587

functional interactions, (S)-Bay K 8644 and FPL 64176 (rat), 599

induction of NADPH-dependent diaphorase, nitric oxide synthase activity, 1163

trachea, relaxation, vasoactive intestinal peptide fragment (guinea pigs), 104

Mutagenesis, hydrophobic amino acids, third intracellular loop of β -adrenergic receptors, activation of G_s, 1061

Mycophenolic acid, compared to mizoribine, T cell proliferation, purine ribonucleotide metabolism (human), 671

Myocytes

atrial, serotonin increase in calcium current, 5-HT₄ receptors (human), 346

cardiac, effects of forskolin and an analog, calcium currents (bullfrog), 880

Myometrium, activation of β -adrenergic receptors, inhibition, Ca²⁺ entry-mediated generation of inositol phosphates (guinea pig), 509

N

- NADPH, -dependent diaphorase and nitric oxide synthase, induction, aortic smooth muscle and macrophages, 1163
- NADPH-cytochrome P450 reductase, cytochrome P450 1A1 and, distribution in lung, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin (rabbit), 1039
- NAD(P)H:(quinone acceptor) oxidoreductase, DT-diaphorase, activation of mitomycin C, hypoxia, 677
- Na-H exchange, functional activation, mutant constructs, β -adrenergic receptor, 1056
- NCB-20 cells
platelet-activating factor, stimulation, phosphoinositide turnover, 281
regulation of signal transduction, purinergic receptor, 743
- N*-(2-Chloroethyl)-4-piperidinyl diphenylacetate, conversion to an aziridinium ion, interaction with muscarinic receptors, 718
- Nerve, slow voltage-dependent block of sodium channels, dihydropyrazole insecticides (crayfish), 120
- Neuroblastoma cells
functional reconstitution, 5-HT_{1C} receptors (mouse), 18
NG108-15 X glioma hybrid cells, 822
- Neurokinin, receptors, amino acid residues, substance P selectivity and specificity (rat), 1096
- Neurokinin-1
receptor isoforms, intracellular effector (human), 24
receptors, antagonists, species differences (rat), 772
- Neurokinin A, binding to NK1 receptors, lung (guinea pig), 147
- Neurons
cerebellar Purkinje, permeation by calcium, kainate/ α -amino-3-hydroxy-5-methyl-4-isoxazolepropionic acid (rat), 603
chloride transport blockers, prevention, NMDA receptor-channel complex activation (rat), 217
cortical, competitive antagonism of glutamate receptor channels, substituted benzazepines, 1130
differentiation, specific antibodies, G₀ isoforms, 273
dissociated, calcium entry, reduced and oxidized glutathione (rat), 308
dorsal horn, activation of glutamate and glycine receptors, L-proline (rat), 793
hippocampal
blockade of nicotinic currents, methyllycaconitine (rat), 802
block by arcaine, NMDA receptor responses (rat), 727
nicotinic acetylcholine currents (rat), 931
sympathetic, intracellular guanosine-5'-O-(2-thiodiphosphate), receptor-mediated responses (bullfrog), 527
- Neuropeptide Y
-induced intracellular calcium release, erythroleukemic cells (human), 767
Y₁ subtype pharmacology, recombinantly expressed neuropeptide receptor, 817
- Neurotransmitters
functionally relevant GABA_A receptors, equivalence, receptor affinity and potency, 1124
selectivity of amino acid transmitters, NMDA and amino-3-hydroxy-5-methyl-4-isoxazolepropionate receptors (rat), 520
- Neutral endopeptidase-24.11, inactivation of atrial natriuretic peptide, vascular endothelium (rat, rabbit, human), 609
- Neutrophils, ligand-operated synthesis, 4-series and 5-series leukotrienes, free fatty acid supply (human), 757
- Nicotine, subtype of nicotinic cholinergic receptor, brain (rat), 31
- Nicotinic currents, blockade by methyllycaconitine, hippocampal neurons (rat), 802
- Niflumic acid, chloride transport blockers, prevention, NMDA receptor-channel complex activation (rat), 217
- Nigrostriatal pathway, chronic selegiline administration, decreased tyrosine hydroxylase activity (rat), 839
- NIH-3T3 cells, transfection of human 5-HT_{1A} receptors, 999

- Nimodipine, alteration of binding to membrane lipid bilayer, cholesterol (rabbit), 315
- Nitrendipine, alteration of binding to membrane lipid bilayer, cholesterol (rabbit), 315
- Nitric oxide, -independent mechanism, inhibition of NMDA-evoked calcium influx, sodium nitroprusside (rat), 779
- Nitrogen oxide synthases, regulation and subcellular location, RAW264.7 macrophages (mouse), 615
- Norepinephrine, loss of response, β - versus α_2 -adrenergic receptors, primary glial cultures (rat), 688
- Nucleosides, cytosolic, tolbutamide sensitivity, ATP-dependent K⁺ channel in pancreatic B cells (mouse), 480

O

- Ocaperidone, risperidone and, receptor binding, effects on monoamine turnover (rat), 494
- Okadaic acid, regulation of P-glycoprotein phosphorylation, phorbol ester and protein kinase C inhibitors, KB cells, 1008
- Oligonucleotides
phosphorothioate antisense
cellular uptake and activity, cationic lipids, 1023
inhibition of DNA polymerases (human), 223
- Oocytes
gg-aminobutyric acid A or C (*Xenopus*), 683
hexachlorocyclohexanes, GABA receptors (*Xenopus*), 1107
steroids and γ -aminobutyric acid receptors, poly(A)⁺ RNA, mammalian brain and retina (*Xenopus*), 89
structure, γ -less nicotinic acetylcholine receptor (*Xenopus*), 708
- Organophosphate, interactions at NMDA receptors, brain synaptic membranes (rat), 750

P

- Pancreas, B cells, cytosolic nucleosides and tolbutamide sensitivity, ATP-dependent K⁺ channel (mouse), 480
- Parenchymal cells, liver, lactosylated high density lipoprotein, carrier for site-specific delivery of drugs (human), 404
- Parkinson's disease, chronic selegiline administration, decreased tyrosine hydroxylase activity, nigrostriatal pathway (rat), 845
- pBC 264, probe for studying cholecystokinin receptors (rat), 1089
- PC12 cells
adenosine A_{2A} receptors (rat), 352
neuronal "nucleotide" receptor, phospholipase C and D, ATP analogues and UTP, 561
- Peptide, nonpeptide angiotensin II antagonists and, receptor interaction, 1081
- Pertussis toxin
heterogeneity of angiotensin II AT₂ receptors, brain (rat), 290
platelet-activating factor, phosphoinositide turnover, neurohybrid NCB-20 cells, 281
- P-glycoprotein
overcoming vinblastine resistance, isoquinolinesulfonamide compounds, Adriamycin-resistant leukemia cells, 1034
regulation of phosphorylation, phorbol ester and protein kinase C inhibitors, KB cells, 1008
- Phencyclidine, -sensitive ethidium binding, *Torpedo* acetylcholine receptor, 331
- Phorbol ester, protein kinase C inhibitors and, regulation of P-glycoprotein phosphorylation, KB cells, 1008
- Phosphodiesterase, thyroid cell adenylyl cyclase activity, carbachol-induced decrease (dog), 163
- Phosphoinositide
pathways, cyclic AMP differentiation, DDT₁-MF₂ cells, 587
turnover, platelet-activating factor, neurohybrid NCB-20 cells, 281
- Phospholipase C
competitive regulation of responses, cAMP and calcium, 577
neuronal "nucleotide" receptor, stimulation by ATP analogues and UTP, PC12 cells, 561

- Phosphorothioate**
 antisense oligonucleotides, cellular uptake and activity, cationic lipids, 1023
 oligonucleotides, inhibition of DNA polymerases, antisense technology (human), 223
- Photolabeling**, photoactivable agonist, nicotinic acetylcholine receptor, 1100
- Pioglitazone**, insulin-sensitizing agent, enhancement, adipocyte differentiation, 393
- Piretanide**, chloride transport blockers, prevention, NMDA receptor channel complex activation (rat), 217
- Pituitary**, -derived AtT-20 cells, SRIF receptor/adenylyl cyclase coupling, 452
- Platelet-activating factor**, stimulation of phosphoinositide turnover, neurohybrid NCB-20 cells, 281
- Platelets**
 novel inhibitor of protein kinase C, regulatory domain, NPC 15437, 38
 quantitative analysis, diacylglycerol second messengers (human), 382
- Polyamine**
 NMDA receptor-associated site, activation, 1,5-(diethylamino)piperidine, 989
 recognition site, mono-/di-/triamines, effects on NMDA receptor complex, 785
- Polyvinyl sulfate**, allosteric interaction, modulation, angiotensin II binding, 809
- Potassium channel**
 ATP-dependent, cytosolic nucleosides and tolbutamide sensitivity, pancreatic B cells (mouse), 480
 cloned human cardiac, block by quinidine, mouse L cell line, 322
- L-Proline**, activation of glutamate and glycine receptors, dorsal horn neurons (rat), 793
- Protein kinase C**
 inhibition of GABA_A receptor, desensitization, 1116
 inhibitors
 2,6-diamino-N-[(1-(1-oxotridecyl)-2-piperidinyl)methyl]hexanamide, regulatory domain, 38
 regulation of P-glycoprotein phosphorylation, KB cells, 1008
 staurosporine, kinetic analysis (rat), 387
- platelet-activating factor, phosphoinositide turnover, neurohybrid NCB-20 cells, 281
- Pseudopterolide**, selective inhibition of cytokinesis, embryos (sea urchin), 631
- Purine ribonucleotide**, metabolism and T cell proliferation, effects of mizoribine, azathioprine (human), 671
- Q**
- Quinidine**, block of cloned human cardiac potassium channel, mouse L cell line, 322
- Quinoxaline**, derivatives, structure-activity relationships (*Xenopus*), 337
- R**
- Receptors**
 acetylcholine
 phenycyclidine-sensitive ethidium binding (*Torpedo*), 331
 single-channel currents, effects of isoflurane, 127
- adenosine A_{2A}, striatum and PC12 cells (rat), 352
- γ-aminobutyric acid
 hexachlorocyclohexanes, RNA from mammalian brain and retina, 1107
 steroids and, poly(A)⁺ RNA (*Xenopus*), 89
- γ-aminobutyric acid A or C, *Xenopus* oocytes, 683
- (RS)-α-amino-3-hydroxy-5-methylisoxazole-4-propionic acid, quantitative autoradiography, brain (rat), 832
- β₁- and β₂-adrenergic, distinct regulation, fibroblasts (hamster), 542
- angiotensin II
 DuP753, guanine nucleotide-binding protein signaling, 154
 modulation of binding affinity, polyvinyl sulfate, 809
 angiotensin II AT₂, heterogeneity, brain (rat), 290
 binding and effects on monoamine turnover, risperidone and ocpiperidone, brain (rat), 494
 chimeric m2/m5 muscarinic, subtype selectivity, muscarinic antagonists (human), 369
- cholecystokinin, [³H]pBC 264 probe (rat), 1089
- dihydropyridine Ca²⁺ antagonist, ion dependence, mitochondria, 45
- dopamine D1, molecular cloning, gene expression (monkey), 652
- endothelin subtype, molecular cloning, cerebellum (pig), 465
- GABA_A
 equivalence between receptor affinity, potency, 1124
 inhibition by protein kinase C activation, desensitization, 1116
 glucocorticoid, gene promoter activity, after antidepressant treatment, 1130
- glutamate
 competitive antagonism by substituted benzazepines, cortical neurons, T21
 messenger RNA, developmental profile in the brain (rat), 660
- glutamate and glycine, activation by L-proline, dorsal horn neurons (rat), 793
- guanine nucleotide-binding regulatory protein-linked, drug efficacy, 549
- heterogeneity, tissue response as a functional discriminator, Schild regressions, 699
- 5-HT_{1A}
 single amino acid residue, binding of β-adrenergic receptor antagonists, 695
 transfection, NIH-3T3 fibroblasts, 999
- 5-HT_{1B}, species homologue, human 5-HT receptor (rat), 1
- 5-HT_{1C}, functional reconstitution, N1E-115 cells (mouse), 18
- 5-HT₄, serotonin increase in calcium current, atrial myocytes (human), 346
- interaction, peptide and nonpeptide angiotensin II antagonists, 1081
- kainate/α-amino-3-hydroxy-5-methyl-4-isoxazolepropionic acid, permeation by calcium, cerebellar Purkinje neurons (rat), 603
- lack of reserve, postsynaptic 5-HT_{1A} receptors, hippocampal membranes (rat), 1066
- γ-less nicotinic acetylcholine, structure of (*Xenopus*), 708
- low affinity, *Escherichia coli* heat-stable enterotoxin, 1073
- mediated calcium entry, block of maitotoxin effects, SK&F 96365, 487
- mediated responses in sympathetic neurons, intracellular guanosine-5'-O-(2-thiodiphosphate) (bullfrog), 527
- N*-methyl-D-aspartate
 block by arcaine, hippocampal neurons (rat), 727
 calcium entry into dissociated neurons, glutathione (rat), 308
 chloride transport blockers, prevention of activation (rat), 217
 dextrorphan binding, brain (rat), 134
 effects of mono-/di-/triamines, polyamine recognition site, 785
 kynurenic acid analogues, glycine site in brain (rat), 914
 L-689,560 binding, brain membranes (rat), 923
 organophosphate interactions, brain synaptic membranes (rat), 750
- quinoxaline derivatives, structure-activity relationships (*Xenopus*), 337
- spermine actions, single-channel currents (rat), 83
- mu*, molecular determinants, fentanyl class of compounds, 185
- muscarinic
 conversion of *N*-(2-chloroethyl)-4-piperidinyl diphenylacetate, aziridinium ion, 718
- guanylnucleotide, cardiac adenylate cyclase (dog), 177
- interactions of cocaine, primary and secondary recognition (human), 736
- regulation of GDP and GTP binding, cardiac sarcolemma (dog), 168

- neurokinin, amino acid residues, substance P selectivity and specificity (rat), 1096
 neurokinin-1
 antagonists, species differences (rat), 772
 intracellular effector (human), 24
 neuronal "nucleotide", phospholipase C and D, PC12 cells, 561
 neuropeptide, Y₁ subtype pharmacology, 817
 nicotinic acetylcholine
 currents, postnatal hippocampal neurons (rat), 931
 forskolin, noncompetitive inhibitor, 908
 photoactivatable agonist, 1100
 nicotinic cholinergic, chronic nicotine treatment, brain (rat), 31
 NMDA, polyamine site activation, 1,5-(diethylamino)piperidine, 989
 NMDA and amino-3-hydroxy-5-methyl-4-isoxazolepropionate, selectivity, amino acid transmitters (rat), 520
 nucleotide-induced enhancement, tolbutamide sensitivity (mouse), 480
 opioid δ, guanine nucleotide-binding proteins, hybrid cells, 822
 purinergic, regulation of signal transduction, NCB-20 cells, 743
 RHL-1, late-stage spermatids (rat), 639
 somatostatin, G proteins, coupling to adenylyl cyclase in pituitary-derived AtT-20 cells, 452
 β- versus α₂-adrenergic, loss or response to norepinephrine, primary glial cultures (rat), 688
 Renin, stable expression in mammalian cells, 53
 Retina
 RNA, hexachlorocyclohexanes, GABA receptors, 1107
 steroids and γ-aminobutyric acid receptors, poly(A)⁺ RNA (*Xenopus*), 89
 Retinoic acid, metabolism, role of isozymes, microsomal cytochrome P-450 (rabbit), 427
 Reverse transcriptase
 HIV type 1, inhibitors, 963
 non-nucleoside inhibitors, resistance, molecular characterization of HIV-1, 446
 Risperidone, ocpaperidone and, receptor binding, effects on monoamine turnover (rat), 494
 RNA
 helicase inhibition, anthracycline anticancer agents, 993
 mammalian brain and retina, hexachlorocyclohexanes, GABA receptors, 1107
 poly(A)⁺, steroids and γ-aminobutyric acid receptors (*Xenopus*), 89
 structure of γ-less nicotinic acetylcholine receptor, *Xenopus* oocytes, 708
 RNA, messenger
 decreased tyrosine hydroxylase activity, chronic selegiline administration, nigrostriatal pathway (rat), 839
 H1 histone, down-regulation, 1-β-D-arabinofuranosylcytosine, 64
 increased glucocorticoid receptor gene promoter activity, after antidepressant treatment, 1016
 metabotropic glutamate receptor, developmental profile, brain (rat), 660
 RNase H, inhibition by phosphorothioate oligonucleotides, antisense technology (human), 223
- S**
- Sadopine, ligands for L-type calcium channels (rabbit), 298
 Sarcolemma, cardiac, regulation of GDP and GTP binding, muscarinic receptor agonists (dog), 168
 Schild regressions, tissue response as a functional discriminator, receptor heterogeneity, 699
 Selegiline, chronic administration, tyrosine hydroxylase activity and mRNA, nigrostriatal pathway (rats), 839
 Serotonin, increased calcium current, 5-HT₄ receptors, atrial myocytes (human), 346
 SK-31690, topoisomerase II-mediated DNA cleavage activity, irreversibility, cleavable complex formation, 237
 SK&F 96365, block of maitotoxin effects, 487
 Sodium channel, slow voltage-dependent block, crayfish nerve, dihydropyrazole insecticides, 120
 Sodium nitroprusside, inhibition of NMDA-evoked calcium influx, nitric oxide- and cGMP-independent mechanism (rat), 779
 Species differences, antagonists, neurokinin-1 receptors (rat), 772
 Spermatids, late-stage, expression, "liver-specific" asialoglycoprotein receptor RHL-1 (rat), 639
 Spermine, multiple actions on NMDA receptor, single-channel currents, cortical neurons (rat), 83
 Staurosporine, protein kinase C inhibition, kinetic analysis (rat), 387
 Steroids, γ-aminobutyric acid receptors, poly(A)⁺ RNA, mammalian brain and retina (*Xenopus*), 89
 Striatum, adenosine A_{2A} receptors (rat), 352
 Substance P
 radioiodinated, binding to NK1 receptors, lung (guinea pig), 147
 selectivity and specificity, amino acid residues, neurokinin receptors (rat), 1096
 Sulfonamides, carbonic anhydrase and, direct measurements, rate constants, 419
 SV40 large T antigen, helicase inhibition, anthracycline anticancer agents, 993
 Synapse, selectivity of amino acid transmitters, NMDA and amino-3-hydroxy-5-methyl-4-isoxazolepropionate receptors (rat), 520
 Synaptic potentials, quinoxaline derivatives, structure-activity relationships (*Xenopus*), 337
- T**
- T cells, proliferation, effects of mizoribine, purine ribonucleotide metabolism (human), 671
 Testosterone, peripubertal administration, hepatic microsomal cytochrome P-450 enzyme activities, imprinting (rat), 981
 Tetrahydroaminoacridine, interaction with acetylcholinesterase, butylcholinesterase (*Torpedo*), 412
 Tetrahydroimidazo[4,5,1-*jk*][1,4]benzodiazepin-2(1*H*)-one allosteric inhibition of HIV-1 reverse transcriptase, 203
 interaction with 1-[(2-hydroxyethoxy)methyl]-6-(phenylthio)thymine, HIV type 1 reverse transcriptase, 963
 Thiol, pools, overexpression of glutathione S-transferase, multidrug-resistant colon cancer cell line (human), 69
 Thymidine
 dideoxyribose analogs, nonfacilitated membrane permeability, desolvation energy, 957
 5'-modified analogs, membrane permeation characteristics (human), 950
 Thyroid, cell adenylyl cyclase activity, carbachol-induced decrease (dog), 163
Torpedo, forskolin as noncompetitive inhibitor, nicotinic acetylcholine receptors, 908
 Trachea, smooth muscle relaxation, vasoactive intestinal peptide fragment (guinea pigs), 104
 Transcription factor κB, 1-β-D-arabinofuranosylcytosine treatment, human KG-1 myeloid leukemia cells, 60
 Transplantation, liver, stimulation, monooxygenation and conjugation (rat), 1149
 Triamines, effects on NMDA receptor complex, polyamine recognition site, 785
 Tyrosine hydroxylase
 decreased activity and mRNA, chronic selegiline administration, nigrostriatal pathway (rat), 839
 induction by cholinergic agonists, vasoactive intestinal polypeptide, adrenal chromaffin cells (bovine), 456
- U**
- Ultrastructure, distribution of cytochrome P450 1A1, NADPH-cytochrome P450 reductase, lung (rabbit), 1039

UTP, neuronal "nucleotide" receptor, phospholipase C and D, PC12 cells, 561

V

Vasoactive intestinal peptide, fragment, trachea smooth muscle relaxation (guinea pigs), 104

Vasoactive intestinal polypeptide, tyrosine hydroxylase induction, cholinergic agonists, adrenal chromaffin cells (bovine), 456

Vinblastine, overcoming resistance, isoquinolinesulfonamide com-

pounds, Adriamycin-resistant leukemia cells, 1034

Vitamin E, killing of cultured hepatocytes, *tert*-butyl hydroperoxide, 1155

Voltage, -dependent calcium channels, Kupffer cells (rat), 435

W

Warfarin, phase II metabolism, primary culture, adult hepatocytes (rat), 209

Pharmacology and Experimental Therapeutics**

INSTRUCTIONS TO AUTHORS

Molecular Pharmacology will publish the results of investigations that contribute significant new information on drug action or selective toxicity at the molecular level. The term "drug" is defined broadly to include chemicals that selectively modify biological function.

Suitable papers are those that describe applications of the methods of biochemistry, biophysics, genetics, and molecular biology to problems in pharmacology or toxicology. Also suitable are reports of fundamental investigations which, although not concerned directly with drugs, nevertheless provide an immediate basis for further study of the molecular mechanism of drug action. Observations of phenomena that shed no light upon underlying molecular interactions are not appropriate for publication. Comparative studies, such as those involving drug-receptor or drug-enzyme interactions that already have been well characterized in other types of cells or tissues, also are inappropriate for publication unless they contribute significant new insight into mechanisms.

Molecular Pharmacology has adopted a uniform policy for evaluation of manuscripts utilizing molecular modeling. Key aspects of content that determine suitability and eventual acceptance include: use of modeling technology to generate predictions concerning new molecules, modeling studies that offer significant new insights into the mechanism of actions of drugs, and inclusion of experimental data that support the predictions of molecular modeling. It is not necessary that each aspect be reflected in every manuscript; however, manuscripts that are purely theoretical in nature or that simply generate structural predictions without correlating these to drug action or new biological data will be returned as unsuitable for publication.

Specific areas of interest include: identification and characterization of receptors for hormones, growth factors, neurotransmitters, toxins, and other drugs; analysis of receptor response pathways; drug effects on metabolic pathways, biosynthesis and degradation of macromolecules, and cellular regulatory mechanisms; analysis of drug-receptor and drug-enzyme interactions; effects of drugs on structure and properties of macromolecules and membranes; relationships between drug structure and activity; molecular mechanisms of drug metabolism; distribution and transport between biological compartments; molecular mechanisms of chemical mutagenesis, carcinogenesis, and teratogenesis; and molecular mechanisms of selective toxicity, drug allergy, and pharmacogenetics.

Page charges. Authors will be billed at the rate of \$40.00 per page after the paper has been published. It is expected that the page charge will be paid if funds are available for that purpose from the author's institution or from the sponsor of this research. Payment of the charge is not a condition for publication. In case of personal financial hardship, page charges will be waived. Neither the editors nor the reviewers will have knowledge as to who has paid the charge, and this payment always will be considered entirely voluntary.

Submission of manuscript. Manuscripts are published in English only and should be sent to Dr. T. Kendall Harden, Editor, *Molecular Pharmacology*, CB 7368, Department of Pharmacology, University of North Carolina School of Medicine, Chapel Hill, North Carolina 27599-7368, U. S. A.

The expenses associated with the review of manuscripts submitted to *Molecular Pharmacology* and other ASPET-sponsored journals that are devoted to publishing original research articles have escalated dramatically in recent years because of ever-increasing costs of postage, supplies, and other office expenses, and the growing number of manuscripts submitted for publication. Thus, it has become necessary for ASPET to follow the example of several other scientific societies which have instituted uniform manuscript handling fees. Therefore, all manuscripts must be accompanied either by a check for \$40 (in U. S. funds drawn on a U. S. bank payable to ASPET) or by a validated purchase order from the authors' institution. The review process for submitted manuscripts will be delayed until the manuscript handling fee or purchase order is received in the Editor's office. If submission of the manuscript handling fee entails a personal financial hardship to the author(s), the fee will be waived. In that event, the author(s) should submit a request for waiver of the fee when the manuscript is submitted.

Manuscripts should be typewritten double-spaced with ample margins on one side of the paper, 8½ × 11 inches (ca. 215 × 280 mm). Submit four complete copies of the manuscript and four copies of each figure, plus one original drawing or photograph of each figure. Each half-tone figure requires four original drawings or photographs. All pages should be numbered consecutively beginning with the title page. Limit your reference listings to the minimal

number required to document the manuscript adequately. In most instances 30 references or fewer should suffice.

Under usual circumstances reviewers will be instructed to return only their comments to the editorial office and to destroy manuscripts after a final decision on their acceptability has been made. Original drawings and single copies of manuscripts not accepted for publication will be returned to the authors upon request.

It is understood that the manuscripts and the results they contain will not have been published previously and are not being submitted elsewhere. If the submitted manuscript utilizes or makes bibliographic reference to articles in press, copies should be included with the manuscript. Manuscripts are accepted for review with the understanding that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Molecular Pharmacology* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher. If and when a manuscript is published, it will become the sole property of the Journal.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Society for Pharmacology and Experimental Therapeutics. No reasonable request by the author for permission to reproduce any of his or her contributions to the journal will be refused.

Accelerated Communications. In order to provide a mechanism for rapid publication of novel experimental findings of unusual and timely significance, manuscripts will be accepted for consideration as Accelerated Communications. Accelerated Communications are not intended for publication of preliminary results. Manuscripts submitted under this category should present novel results that are clearly documented and should make a conceptual advance in their

field. They will be reviewed by the same criteria applied to regular papers in *Molecular Pharmacology*. The manuscript should be accompanied by a transmittal letter briefly outlining the significance of the work and providing a list of at least three scientists who would be appropriate reviewers.

Accelerated Communications will be reviewed as rapidly as possible with the aim of reaching an editorial decision within four weeks of receipt of the manuscript. It is expected that Accelerated Communications which are accepted will be published in essentially the form submitted. Manuscripts accepted without revision will be published within four to five months of initial receipt. Manuscripts accepted with a requirement for minor revisions will be published two or three months following receipt of a suitably revised version.

All manuscripts that require major revisions or that do not fit the criteria for Accelerated Communications will be returned to authors for revision and further consideration as a regular paper. Such manuscripts will retain the original submission date if revised versions are received in a timely manner.

Accelerated Communications may be submitted in the same style as regular manuscripts. Results and Discussion may be combined at the discretion of the authors. Manuscripts must not exceed five printed pages in the journal. This corresponds approximately to 25 double-spaced typewritten pages (1-inch margins) including all components of the manuscript and counting each figure as a page of typewritten text. Manuscripts that are judged to be too long will be considered as regular papers.

Organization and style of manuscripts. The policy of the Journal is to allow authors maximum freedom in organizing and presenting their material, and in expressing their ideas, provided only that clarity and conciseness are achieved. For most manuscripts, the most suitable format is: (1) Summary, (2) Introduction, (3) Materials and Methods, (4) Results, and (5) Discussion.

Certain conventions must be observed. Chemical and mathematical formulas and abbreviations should follow the *Instructions to Authors of the Journal of Biological Chemistry* (Vol. 261, pp. 1-11, January 10, 1986). Drugs must be referred to by their generic or chemical names throughout the text, but may be identified by trade name in parentheses or a footnote. The systematic name and number given by the Commission on Enzymes of the International Union of Biochemistry should be included for each enzyme of importance in a paper, at the point in the Summary or Introduction where the enzyme is first mentioned. The use of abbreviations should be minimized and abbreviations avoided in the Summary. All essential abbreviations should be defined in a single footnote when first introduced. Abbreviations of journal names should conform to the style of *Biological Abstracts*. References to papers that have been accepted for publication, but have not appeared, should be cited like other references with the abbreviated name of the journal followed by the words "in press." Copies of such papers should be sent whenever the findings described in them have a direct bearing on the paper being submitted for publication. "Personal Communications" and "Unpublished Observations" should be cited in footnotes to the text and should not be included in the reference list.

A manuscript should include the following, in the order listed: (1) Title. Numbered footnotes to the title should be avoided; acknowledgment of financial support should be given in an unnumbered footnote to the title. (2) Names of authors, their laboratory and institution. (3) A running title, not exceeding 60 characters and spaces. (4) Summary. (5) Text. Footnotes should be referred to by superscript numbers and references by numbers in parentheses. (6) References, numbered according to order of citation in the text, including title and complete pagination. Examples: 1. Goren, J. H., L. G. Bauce, and W. Vale. Forces and structural limitations of binding of thyrotropin-releasing receptor: the pyroglutamic acid moiety. *Mol. Pharmacol.* 13:606-614 (1977). 2. Chernow, B., and J. T. O'Brian. Overview of catecholamines in selected endocrine systems, in *Norepinephrine* (M. G. Ziegler and C. R. Lake, eds.). Williams and Wilkins, Baltimore, 439-449 (1984). 3. Snedecor, G. W., and W. G. Cochran. *Statistical Methods*. Iowa State University Press, Ames (1967). (7) Footnotes, numbered according to order of appearance in the text. (8) Tables. (9) Figures. (10) Legends to figures. (11) Name and address of person to receive galley proof.

Tables. These should be numbered with arabic numerals and designed to fit the single-column width of the full-page width. Every table should have an explanatory title and sufficient experimental detail in a paragraph following the title to be intelligible without references to the text (unless the procedure is given in the Methods section, or under another table or figure). Footnotes to tables should appear beneath the tables themselves and should be designated by lower-case italic superscript letters, *a*, *b*, *c*, etc.

Figures. These should be numbered with arabic numerals. Each of the four manuscript copies should contain all of the figures. Only the original set need be of quality suitable for reproduction except in the case of half-tones, which require four sets of photographs or original drawings. These should be unmounted glossy photographs (or original India-ink drawings). Usually figures will be reduced to one column width (85 mm) and all numbers after such reduction should be at least 1.5 mm high. The figures must be ready, in all respects, for direct reproduction: no lettering or other art work will be done by the publisher. If symbols are not explained on the face of the figure, only standard characters, of which the printer has type, may be used (X, O, ●, □, ■, Δ, ▲, ⊙). The back of each photograph should bear its number, and the legend TOP at the appropriate edge. The list of legends for the figures should give captions and sufficient experimental detail, as required for tables.

Page proof. Authors will be billed for substantial changes in page proof. The Editors are very much interested in having accepted contributions appear in the earliest possible issue of the Journal, and therefore request that galley proof be returned within 24 hours after its receipt. In exceptional cases, a "Note added in proof" may be attached and will be published if the Editor approves.

Reprints and page charges. An order form for reprints as well as information on the estimation of page charges will be mailed with galley proof. Please direct questions on reprints, page charges, or other business matters to Kay Croker, Executive Officer, American Society for Pharmacology and Experimental Therapeutics, 9650 Rockville Pike, Bethesda, Md. 20814. Telephone (301)530-7060.

One of the top ranking journals in the field

PHARMACOLOGICAL REVIEWS

*Official Publication of the American Society for
Pharmacology and Experimental Therapeutics, Inc.*

Robert E. Stitzel, PhD, Editor
West Virginia University Medical Center

PHARMACOLOGICAL REVIEWS is a showcase for important review articles in your field, featuring longer papers on topics of high current interest. Recent articles include:

The Physiology and Pharmacology of Corticotropin-Releasing Factor
M.J. OWENS and C.B. NEMEROFF

Structure and Function of Alpha-Adrenoceptors
R. RUGGOLO

**Serotonin and Neuropsychiatric Disorders:
Implications for the Development of New
Psychotherapeutic Agents**
CAROLE WILMOT

PHARMACOLOGICAL REVIEWS continues to publish the important, longer papers of interest to pharmacologists, physiologists, toxicologists, and biological chemists. No library serving the pharmacologist should be without a subscription.

To subscribe to **PHARMACOLOGICAL REVIEWS**, use the coupon below. Or for even faster service — CALL TOLL-FREE 1-800-638-6423 from anywhere in the U.S. or Canada.

INFORMATION TO SUBSCRIBERS

MOLECULAR PHARMACOLOGY is published monthly, two volumes a year, beginning in January & July. Instructions to Authors will be found in every issue.

Correspondence concerning business matters should be addressed to Williams & Wilkins, 428 East Preston St., Baltimore, Maryland 21202-3993 U.S.A.

Correspondence regarding editorial matters should be addressed to the Editor, Dr. T. Kendall Harden, CB 7368, Department of Pharmacology, University of North Carolina School of Medicine, Chapel Hill, NC 27599-7368.

Annual Subscription Rates—U. S. A. AND POSSESSIONS: personal, \$100.00; institutional, \$210.00, single copy, \$18.00. FOREIGN: personal, \$130.00; institutional, \$240.00; single copy, \$21.00. (Prices subject to change.) Institutional (multiple reader) rate applies to libraries, schools, hospitals, clinics, group practices, and federal, commercial, and private institutions and organizations. Foreign subscribers who wish to have issues sent by air mail may inquire of the publisher for the additional cost. The GST Tax Number for Canadian subscribers is 123394371.

Change of address: Publisher must be notified 60 days in advance. Journals undeliverable because of incorrect address will be destroyed. Duplicates can be obtained (if available) from the publisher at the regular price of single issues.

New subscriptions are entered to begin with the next issue to publish unless instructed otherwise by the subscriber. Subscriptions run for a 12-month period.

To avoid a break in your series, subscriptions should be renewed promptly. The publisher cannot guarantee to supply back issues on belated renewals.

Reprints of individual articles are available *only* from authors.

Microfilm. For availability, inquire of Williams & Wilkins.

Williams & Wilkins, Baltimore, MD 21202-3993 U. S. A.
