original papers on...

Xenobiotica

The fate and safety evaluation of foreign compounds in biological systems

EDITOR

G. Gordon Gibson
School of Biological Sciences
University of Surrey
Guildford, Surrey, UK

XENOBIOTICA covers three main areas:

General Xenobiochemistry

including the metabolism and disposition of drugs and environmental chemicals in animals, plants, and micro-organisms, and the related methodology

Molecular Toxicology

concerning mechanisms of toxicity and the study of toxicology at the molecular level

Clinical Pharmacokinetics and Metabolism

focusing on the pharmacokinetic behavior of foreign compounds in man

A close relationship between **XENOBIOTICA** and the International Society for the Study of Xenobiotics has been established, resulting in special issues of the journal.

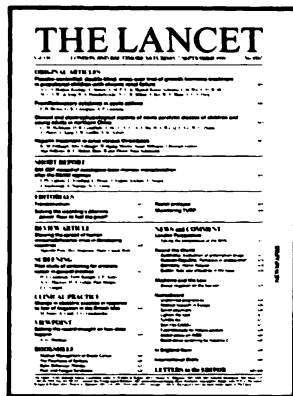

Recent contents include:

Comparison of rat liver microsomal metabolism of the enantiomers of warfarin and 4'-nitrowarfarin, *J J R Hermans and H H W Thijssen* (Netherlands); Prediction of the reactivities of cyclopenta-polynuclear aromatic hydrocarbons by quantum mechanical methods, *J R Rabinowitz and S B Little* (USA); Metabolism and pharmacokinetics of nufenoxole in animals and humans: an example of stereospecific hydroxylation of an isoquinolidine ring, *C S Cook et al.* (USA); Biotransformation of a new pyrrolidinone cognition-enhancing agent: isolation and identification of metabolites in human urine, *F Fujimaki et al.*
