Correction to “Negative and positive regulatory epitopes in the C-terminal domains of the human B1 and B2 bradykinin receptor subtypes determine receptor coupling efficacy to G\textsubscript{9/11}-mediated phospholipase C\beta activity”

In the above article [Dong Soo Kang DS and Leeb-Lundberg LMF (2002) Mol Pharmacol 62:281–288], the title was incorrect. The correct title is “Negative and positive regulatory epitopes in the C-terminal domains of the human B1 and B2 bradykinin receptor subtypes determine receptor coupling efficacy to G\textsubscript{9/11}-mediated phospholipase C\beta activity”.

We apologize for this error and regret any confusion or inconvenience it may have caused.
