

# Proteasome Inhibitors Bortezomib And Carfilzomib Stimulate the Transport Activity of Human Organic Anion Transporter 1

Yunzhou Fan and Guofeng You\*

Molecular Pharmacology

**Supplemental Figure 1. Full blot for Fig 2: immunoprecipitated OAT1.** OAT1-expressing HEK293 cells were treated with bortezomib (25 nM) or carfilzomib (0.5  $\mu$ M) for 12 h. Treated cells were then lysed, and OAT1 was immunoprecipitated with anti-Myc antibody or with mouse IgG (as negative control, lane 3 and 6), followed by immunoblotting (IB) with anti-Myc antibody to determine the amount of OAT1 immunoprecipitated.
