

BAY58-2667 activates different sGC species by distinct mechanisms that indicate its principal target in cells is the heme-free sGC β -Hsp90 complex

Yue Dai, and Dennis J. Stuehr

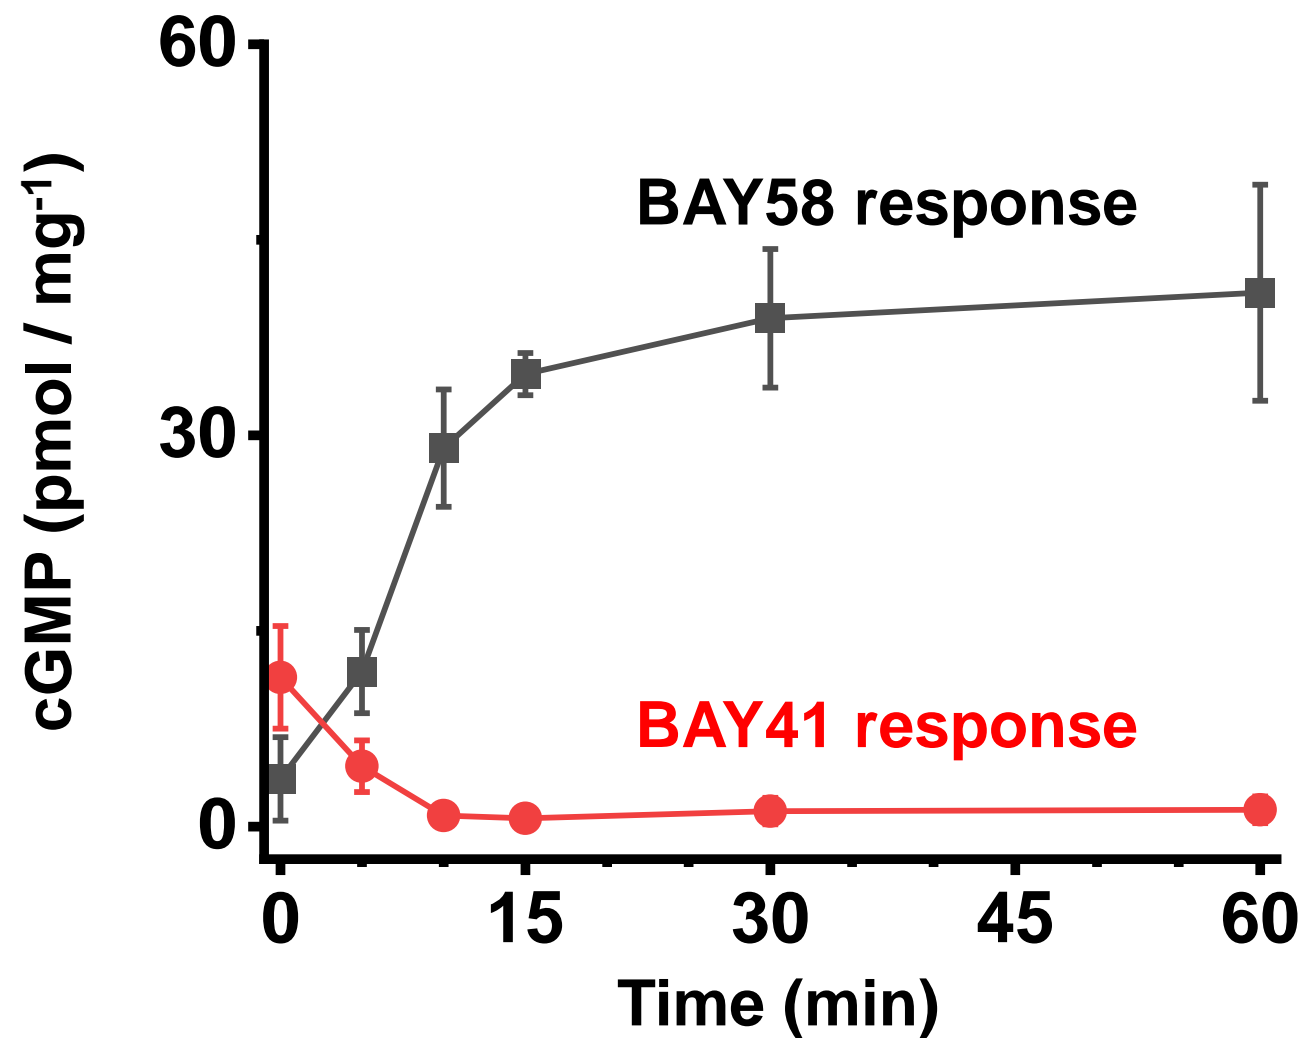

Figure S1. Effects of ODQ on the activity of sGC transiently expressed in HEK293 cells. cGMP productions in response to BAY 41 or BAY 58 by HEK293 supernatants made from cells given ODQ with different times were quantified using a cGMP ELISA kit. Data are the mean \pm SD of 3 replicates and representative of 2 independent trials.
